

HOW TO GET THE MOST FROM FUEL INFUSION

Before You Begin:

Before you begin using Fuel Infusion, it is helpful to have a record of your current fuel economy (MPG). This will help you more accurately see the benefits of Fuel Infusion. If you don't already know what your current MPG is, then you can use the mileage tracking form on the back of these instructions to establish it.

Instructions:

Add Fuel Infusion tablet(s) to your fuel tank prior to adding fuel. Each tablet treats 15 gallons of fuel. You can't over treat your fuel, so don't worry about adding too much. For example, if you have a 22 gallon tank you can add one and 1/2 tablets, or you can just add two. Use Fuel Infusion each time you fuel up for best results and continued savings.

What to Expect:

- An increase in power**
- An increase in fuel economy (MPG)**
- A significant decrease in emissions**
- Oil stays clean longer**
- Engine starts easier and runs better**
- Engine runs cooler**
- Exhaust temperature is lowered**

Keep in Mind:

In most cases, you will see results almost immediately, but occasionally it can take some time for the full results of Fuel Infusion to be realized. Please be patient with the process.

**Results may vary depending on engine condition, age of vehicle, driving habits, weather conditions, tire inflation, idling time, proper maintenance and other factors. Some vehicles will take longer than others to show positive results because of pre-existing carbon deposit build-up.*
